

BRIGHT SIGHTS®

High Visibility Gun Sight Coatings for Pistols, Rifles, Shotguns

TARGET SHOOTING

Bright Sights® high visibility gun sight coatings increases the contrast between the front and rear sights and the contrast between the sights and the target. This high visibility color contrast provides the shooter with quick sight alignment, rapid target acquisition, and faster and more accurate shot placement.

SPORTS SHOOTING & HUNTING

Bright Sights is a tough and durable coating that stays on firearm sights in rugged environments and even under the extreme heat and vibration of rapid fire.

LAW ENFORCEMENT ACCURACY

Bright Sights is used by Professional Gunsmiths, Hunters, Competition Shooters, Tactical units, SOG, and Law Enforcement units throughout the United States and worldwide.

THE RIGHT SIGHT FOR YOU

Bright Sights is available in several colors so you can find the best combination of colors that's right for you and your individual shooting conditions.

BRIGHT SIGHTS® Ghost Glow™ is a light activated substance that must be charged with light to glow in the dark. This can be sunlight, a light bulb or even the beam of a flashlight. The duration and intensity of the light will determine the time and intensity of luminescence. Ghost Glow is not intended to be a replacement for true night sights, but as an enhancement to our high visibility gun sight coatings.

Ghost Glow has the unique ability of mixing with its corresponding color of Bright Sights. Ghost Glow is available in green, yellow, orange and white. This can be mixed in any ratio, but a 25% Bright Sights to 75% Ghost Glow mix should prove suitable for most applications. We suggest putting a small amount of Bright Sights and a greater amount of Ghost Glow on a small piece of scrap paper, mix the two coatings together and apply to your gun sights. (It is best to apply different colors to your front and rear sights.)

Ghost Glow is made from the same tough durable coating as our Bright Sights High Visibility Gun sight Coatings, and is just as easy to apply.

What Our Customers Say About BRIGHT SIGHTS®

"Front sight focus was suddenly an instinctive thing to do, as the orange colored front sight draws your attention to it. This immediately cut my groups in half compared to the last time I fired the gun. BRIGHT SIGHTS has changed my hand gunning performance."

B. Kuiper, The Netherlands

"I'm 55 years old and near sighted and far sighted and I wear tri-focal eyeglasses. I find this product works in all lighting conditions at indoor and outdoor ranges. I have tried many products in numerous catalogs and even made up a few. This product is fantastic and will keep me shooting for a long time. Thanks also for the great product support"

P. Paduano, West Virginia

"This is the best coating I've ever put on gun sights... it's a quality product and a quality company"

L. Rich, Gunsmith, Oregon

BRIGHT SIGHTS®
High Visibility Gun Sight Coatings

Caution: Bright Sights will not wash out of clothing. We suggest using green on the rear sights and orange on the front, for maximum effect.

Keep out of the reach of children or animals. Keep out of eyes and use caution as with any coating product. Use soap and water to clean hands after use. If coating gets in eyes, flush with water. If irritation occurs, contact a physician.

Paint Your Gun Sight with BRIGHT SIGHTS® and See the Difference

- SHOOT TIGHTER GROUPS
- ACCURATE SIGHT ALIGNMENT
- IMPROVED SIGHT PICTURE
- FASTER TARGET ACQUISITION
- SAFE, NON-TOXIC

INSTRUCTIONS

- Remove all oil from your sights using Bright Sights® Cleaner and a cotton swab.
- Shake container firmly to mix the coating.
- If you have Bright Sights® *Ghost Glow™*, mix 75% *Ghost Glow* with 25% regular Bright Sights of the same color.
- If you have dot sights, use a Bright Sights® Applicator or toothpick and dip just the tip into the coating. Carefully place this drop of coating on to your sight. Repeat to make the dot larger or higher.
- If you have a bead, blade or ramp sight, use a small artist's brush.
- Close the Container. Do not let the coating dry out!
- You may clean up using water and a damp rag.
- Allow your sights to dry for 48 to 72 hours to cure properly.
